

76th Annual Meeting of The European Federation of Animal Science

**INNSBRUCK, AUSTRIA
AUGUST 25 - 29, 2025**

PROGRAMME EAAP 2025

76th Annual Meeting of The European Federation of Animal Science, Innsbruck, August 25 - 29, 2025

Ladies and Gentlemen,

on behalf of the organizing committee and the entire community of the Austrian Association for Animal Science and Production I am happy and honored to welcome you to the 76th annual meeting of the European Association for Animal Production, which will be held in Innsbruck on August 25th -29th, 2025. The overarching theme of the congress is “Future-proof livestock farming”.

Innsbruck, the capital of the Tyrol, is nestled in a breathtaking Alpine panorama. The city combines nature, culture, science, and business, blending traditional customs with modern innovations. Innsbruck promotes diversity and has a high quality of life, with clear air, pure water, and state-of-the-art infrastructure. The city's economy is strong, and its universities are renowned and rich in tradition, keeping the city vibrant with over 35,000 students.

Austria is renowned for their diverse and high-quality agricultural products. The region around Innsbruck is particularly famous for its dairy products, with about 35 to 40% of the agricultural production value coming from the milk industry. This sector includes around 4,200 farms that produce approximately 350,000 tons of milk annually. The region also boasts 44,300 dairy cows, 2,376 sheep, and 6,075 goats, all contributing to the rich dairy heritage of the Tyrol.

Tiroler Bergkäse is a protected designation of origin for a traditionally produced, matured hard cheese made from the milk of cows that graze in the Tyrolean mountains. Similarly renowned are the Tyrolean bacon specialties, which acquire a distinctive aroma through the unique climate and traditional smoking process. Additionally, the Tyrol is known for its direct marketing of agricultural products, with over 4,000 farms selling their produce directly to consumers through various channels such as farmers' markets, farm shops, and home delivery services.

In addition, Austria is renowned for the quality of agricultural products, like beef, grains, and wines. The country's beef industry is an important part of its agricultural landscape. In addition to livestock, Austria also produces a variety of high-quality grains such as wheat, barley, and corn that are crucial to the nation's food production.

Beyond meat and grains, Austria's winemaking tradition dates back centuries, with renowned wine regions like Lower Austria, Burgenland, and Styria producing world-class vintages like the famous Grüner Veltliner. These diverse agricultural products highlight the breadth and excellence of Austria's food and beverage industries. Some of these production and marketing systems will be subject of technical visits organized at the end of the technical session.

Welcome to Innsbruck!

Industry Members Club

EAAP started in 2023 a new initiative to create closer connections between European livestock industries and the animal science network. Therefore, the “EAAP Industry Club” was shaped with the specific aim of bringing together the important industries of the livestock sector with our European Federation of Animal Sciences. All companies dealing with animal production (nutrition, genetic, applied technologies, etc.) are invited to join the “EAAP Industry Club” because industries will have opportunity to increase their visibility, to be actively involved in European animal science activities, and to receive news and services necessary to industries. In addition, through the Club, industries will enlarge their scientific network and will receive specific discounts on sponsoring activities.

The Industries that already joined the “EAAP Industry Club” are:

YoungEAAP

What is the YoungEAAP?

YoungEAAP is a group of young scientists organized under the EAAP umbrella. It aims to create a platform where scientists during their early career get the opportunity to meet and share their experiences, expectations and aspirations. This is done through activities at the Annual EAAP Meetings and social media. The large constituency and diversity of the EAAP member countries, commissions and delegates create a very important platform to stay up-to-date, close the gap between our training and the future employer expectations, while fine-tuning our skills and providing young scientists applied and industry-relevant research ideas.

Committee Members at a glance

- Ines Adriaens (President)
- Jana Obsteter (Vice President)
- Giulia Gislon (Secretary)

YoungEAAP promotes Young and Early Career Scientists to:

- Stay up-to-date (i.e. EAAP activities, social media);
- Close the gap between our training and future employer expectations;
- Fine-tune our skills through EAAP meetings, expand the special young scientists' sessions, and/ or start online webinars/training with industry and academic leaders;
- Meet to network and share our graduate school or early employment experiences;
- Develop research ideas, projects and proposals.

Who can be a Member of YoungEAAP?

All individual members of EAAP can join the YoungEAAP if they meet one of the following criteria:
Researchers under 38 years of age OR within 10 years after PhD-graduation.

Just request your membership form (info@eaap-youngclub.org) and become member of this network!!!

BPC INSTRUMENTS

Welcome to Austria!

We are honored to host the EAAP annual congress once again — more than two decades since it was last held in Austria. Welcoming guests from around the world is always a joy, especially when we get to showcase our unique landscape in combination with local agriculture and food production in the alpine setting of Innsbruck.

“Future-Proof Livestock Farming,” resonates with our national focus on circular economy and site-adapted agriculture in Austria. Favourable locations for fruit and vegetable cultivation, such as arable farming and fattening, alpine mountain regions skilfully used by ruminants for landscape maintenance and high-quality dairy products, as well as careful growth of beef cattle and animal-friendly husbandry in mother-bound calf rearing. Austrian agricultural systems combine both tradition and innovation.

As a member of the EAAP, the Federal Ministry of Agriculture is keen to share the latest research findings with the scientific community, particularly with regard to the transfer into practice, feasibility and profitability for production agriculture.

With a shared commitment to sustainable livestock farming, we are especially pleased to have the ‘Sustainable Animal Husbandry Austria’ association at our side as a competent and industry-recognised partner in the preparations leading up to the EAAP Annual Meeting here in Innsbruck as well as the Tyrolean Chamber of Agriculture – we thank our partners for their support!

We look forward to offering you enjoyable moments, interesting encounters and space for informative dialogue throughout the event.

Warm regards,
The Local Organizing Committee

As a member of the EAAP we are grateful for the great international exchange regarding science and research, further development and innovation, as well as learning from each other and talking to each other.

While agriculture, forestry and water management remain at the forefront, our agency has newly incorporated the agendas of climate, environment, and nature conservation

Especially with the takeover of climate and environmental agendas, it is a concern of our house to present agriculture - and especially animal husbandry - as an important factor with regard to circular economy, food safety, and food security.

But that's not all. As a sector that is heavily affected by climate change, we also contribute to mitigating the consequences proactively through our actions, behavior, and consumption, and support climate change adaptation measures in various ways, strengthen their resilience, work in a future-oriented manner, and take into account new requirements for agriculture without jeopardizing their competitiveness.

Agriculture is part of our identification and culture, creates jobs, shapes the rural landscape, contributes to the economy, and provides security. One of our main concerns is to create trust in the quality of our products, administration, and transparency.

Sustainable Animal Husbandry Austria
NTÖ – Nachhaltige Tierhaltung Österreich

As an umbrella organisation, Sustainable Animal Husbandry Austria (NTÖ) represents all producer associations and industry representatives of livestock farming in Austria. As well as acting as a communication platform, we are also a contact point for farmers' concerns and offer support in implementing various agricultural guidelines, drafting them and representing agricultural interests in various committees. We also provide education to farmers, and our close relationship with research partners helps us to shape the course programme and the interests of farmers.

It is essential to us that new scientific information is made accessible to farmers and linked to practice. Only in this way can ongoing developments be implemented directly on farms. NTÖ has a strong focus on public relations work and the creation of numerous teaching materials, information brochures, appealing short videos, and informative social media content to increase transparency and improve the public image of modern, innovative agriculture. Our vision is to strengthen the link between animal husbandry and consumers once again.

Why Innsbruck

©Innsbruck Tourismus/Christof Lackner

Innsbruck, the picturesque capital of the Austrian province of the Tyrol, is embedded in a breathtaking Alpine panorama. Nature, culture, science, research and business come together in Innsbruck and the Tyrol region: traditional customs meet modern innovations, old meets new, regional specialties meet international discoveries. Innsbruck promotes and lives diversity at all levels. The quality of life in Innsbruck is exceptionally high: the Tyrolean capital is regularly rated as an excellent place to live. Clear mountain air, the purest spring water, outstanding safety, high standards and state-of-the-art infrastructure contribute to people's satisfaction. The Tyrolean economy is one of the strongest in Austria. The universities in the provincial capital are among the most renowned in Europe and, with over 350 years of history, are also the richest in tradition. Over 35,000 students ensure that the city always remains fresh and young.

But tradition also has a history. Especially when it comes to alpine farming, there is probably no better place in Austria than here to bring the world together to not only discuss the future of animal husbandry, site-adapted agriculture and, above all, animal husbandry as part of a functioning circular economy, but also to experience it at first hand.

About Austria

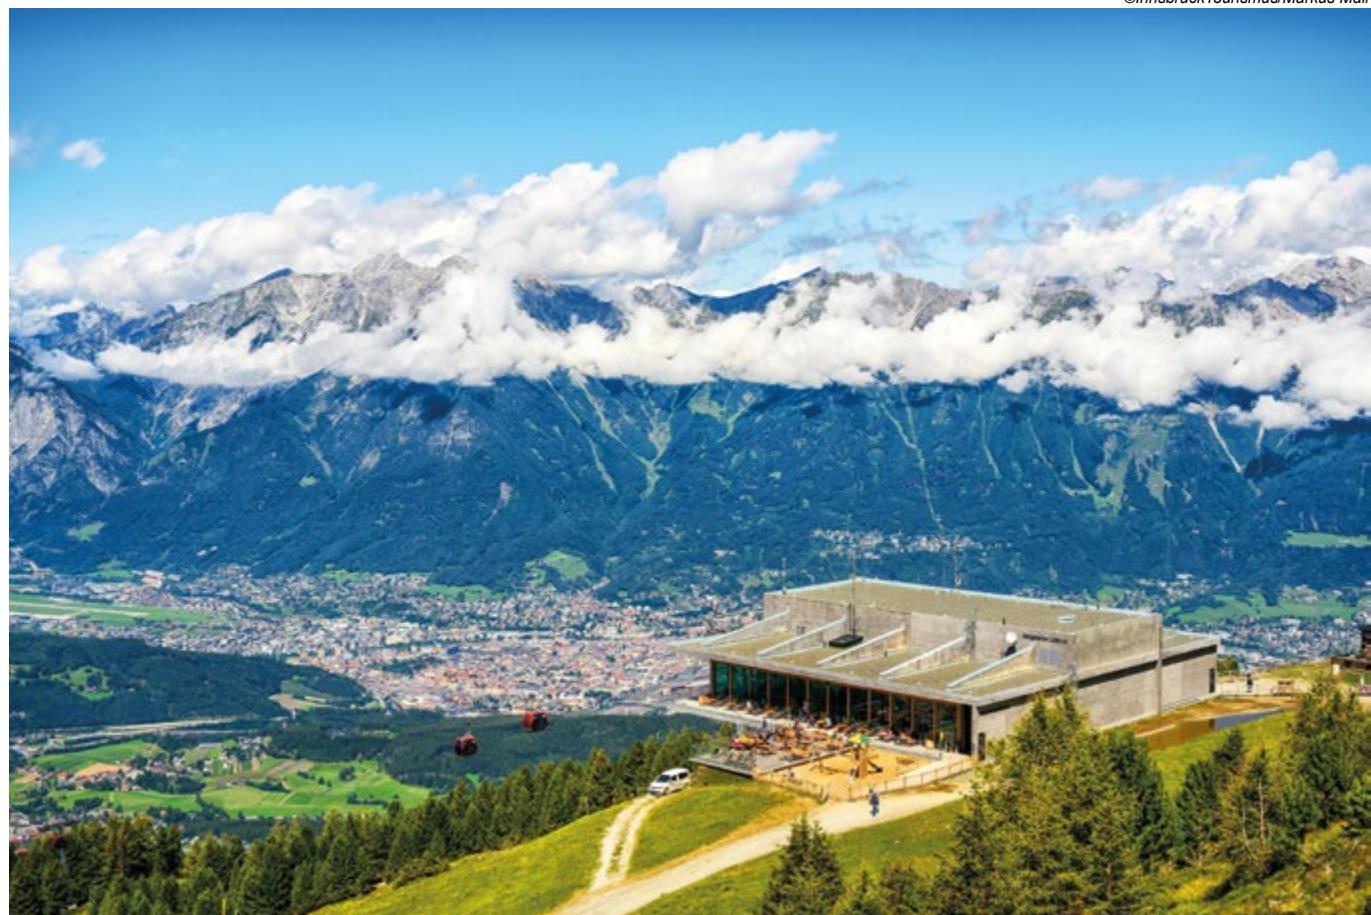

Austria is renowned for their diverse and high-quality agricultural products. The region around Innsbruck is particularly famous for its dairy products, with about 35 to 40% of the agricultural production value coming from the milk industry. This sector includes around 4,200 farms that produce approximately 350,000 tons of milk annually. The region also boasts 44,300 dairy cows, 2,376 sheep, and 6,075 goats, all contributing to the rich dairy heritage of the Tyrol.

Tiroler Bergkäse is a protected designation of origin for a traditionally produced, matured hard cheese made from the milk of cows that graze in the Tyrolean mountains. Similarly renowned are the Tyrolean bacon specialties, which acquire a distinctive aroma through the unique climate and traditional smoking process. Additionally, the Tyrol is known for its direct marketing of agricultural products, with over 4,000 farms selling their produce directly to consumers through various channels such as farmers' markets, farm shops, and home delivery services.

In addition, Austria is renowned for the quality of agricultural products, like beef, grains, and wines. The country's beef industry is an important part of its agricultural landscape. In addition to livestock, Austria also produces a variety of high-quality grains such as wheat, barley, and corn that are crucial to the nation's food and feed production which gives us an high percentage of homegrown feed for animal production.

Beyond meat and grains, Austria's winemaking tradition dates back centuries, with renowned wine regions like Lower Austria, Burgenland, and Styria producing world-class vintages like the famous Grüner Veltliner. These diverse agricultural products highlight the breadth and excellence of Austria's food and beverage industries. Some of these production and marketing systems will be subject of technical visits organized at the end of the technical session.

Agriculture in Austria

©Innsbruck Tourismus/Markus Mair

Austria covers a total area of 8.4 million hectares. Of this, around 2.55 million hectares are used for agricultural purposes according to INVEKOS (2022). This area is made up of 1.32 million hectares of arable land and 1.17 million hectares of permanent grassland. The agricultural landscape is characterised by numerous small to medium-sized family farms, which play a crucial role in Austria's food security. On average, a farmer in Austria cultivates an area of 44.9 hectares. Particularly noteworthy is the strong focus on organic farming, which makes Austria one of the world's leading countries in this area, accounting for around 25% of total agricultural land.

Austria has the largest proportion of Alpine land of all Alpine countries, with 63% of the country's surface area being high Alpine mountains. Livestock farming, dairy farming and forestry dominate in these regions due to the geographical conditions of relief and climate. Arable farming, on the other hand, is mainly practised in areas north of the Danube, in Burgenland and in southern Styria, with the main crops being wheat, barley, maize, potatoes and sugar beet. Viticulture and fruit growing are widespread in climatically favoured locations, particularly in the foothills of the Alps, in Lower Austria and in the Danube valley.

Austrian agriculture makes a significant contribution to global food security, as shown by the high Global Food Security Index, which places Austria in 12th place with a score of 78.1%. The level of self-sufficiency is also impressive, with meat grain (145%), wine (100%), drinking milk (178%), veal and beef (147%) and pork (108%) are produced in the country. It is important to note that around 70% of Austria's agricultural land is located in less-favoured areas, particularly in mountainous regions.

Almost half of the country's total area, namely 47.9 per cent, is covered by forest, more than 80 per cent of which is privately owned. Around 145,000 families own forests and pass them on from generation to generation, ensuring the diverse and sustainable services provided by the forest in a long-term and responsible manner. The forest owners thus not only secure the habitat for animals and plants, but also the income for around 300,000 people. With an area share of around 46.2 per cent, spruce is the most important tree species in Austria, followed by beech with a share of 10.5 per cent. The country's abundance of forests has contributed to the development of modern forestry and an extensive timber and wood processing industry with a high export quota.

Places to see in Innsbruck

A SYMBOL OF INNSBRUCK: THE GOLDEN ROOF

The “Goldenes Dachl” in Innsbruck is an iconic landmark of the city. Built in 1500, the late Gothic oriel adorns the old town and is characterised by its roof made of 2,657 fire-gilded copper shingles. It was originally built for Emperor Maximilian I as a grandstand from which he could watch festivals and tournaments. Today, the Golden Roof houses a museum that offers insights into the history and culture of the Tyrol.

LEARN ABOUT TYROL'S FREEDOM FIGHTERS

In 1809, Andreas Hofer led the Tyrolean rebellion to the Battle of Bergisel. The TIROL PANORAMA is an impressive 360° work of art covering almost 1,000 square metres and depicting scenes from the legendary Tyrolean fight for freedom. Visit the museum and combine it with a hike on the Bergisel circular trail to Drachenfels to experience history up close.

SPARKLING SPLENDOUR

Over a hundred years ago, Daniel Swarovski (1862-1956) revolutionised the world of jewellery by developing a method of cutting and polishing glass in a way that it glitters and sparkles like diamonds. The Swarovski Crystal Worlds in Wattens, open since 1995, invite visitors into the fascinating world of these sparkling stones. Multimedia artist André Heller has created a unique place of fantasy: Ancient history and contemporary works of art come together in 18 sparkling rooms. The exhibition of EAAP2025 will be located in the Kristall Foyer, a place that has certainly earned its name as it has a wall relief covered in thousands of crystals from the Tyrolean company Swarovski.

CENTURIES OF SPLENDOUR IN THE IMPERIAL RESIDENCE

In 1500, during the reign of Emperor Maximilian I, the Imperial Palace in Innsbruck was completed. The magnificent building not only served as the residence of the imperial family, but also fulfilled representative purposes.

Over the centuries, the palace was remodelled several times. Alongside the Vienna Hofburg and Schönbrunn Palace, the Innsbruck Hofburg is one of the most important cultural buildings in Austria.

SPECTACULAR VIEWS OF THE CITY

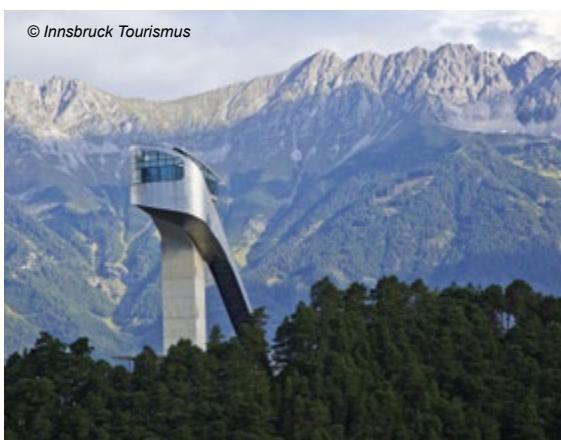

More than 133 steps lead up to the viewing platform of the Innsbruck city tower. After its construction in 1450, it was used as a watchtower and offered a comprehensive view of the entire city. Whenever a threat arose, be it from enemies or fire, the citizens were warned quickly. Today, the viewing platform, which towers 31 metres above the ground, offers both locals and tourists wonderful views of Innsbruck and the surrounding mountains.
